

KippsDeSanto & Co. advises Earth Resources Technology on its investment from Macquarie Capital

May 28, 2024

KippsDeSanto & Co. is pleased to announce that its client, Earth Resources Technology (“ERT” or the “Company”), has received an investment from Macquarie Capital (“Macquarie”), the advisory, capital markets and principal investment arm of Macquarie Group.

Founded in 1993 and headquartered in Laurel, MD, ERT integrates full-spectrum, data-driven science and technology solutions that address complex and critical federal Earth and space mission priorities – from predicting extreme weather and climate trends to tracking and analyzing airborne and ocean pollutants. ERT’s core data and geospatial solutions help to protect lives and properties and to sustain and improve economies and ecosystems.

The Company is a long-standing and embedded partner to National Oceanic and Atmospheric Administration (“NOAA”), National Aeronautics and Space Administration (“NASA”), and the U.S. Air Force (“USAF”) and has developed a well-respected and well-known reputation as a leader within the Earth and space science domains. ERT’s core competencies include: satellite ground segment engineering; enterprise computing; data analytics; artificial intelligence; research and development; and sustainment and operations for satellite, weather, climate, ocean, and environmental missions.

Macquarie’s investment represents the creation of a new platform company for the private equity group. Macquarie believes that the partnership will provide ERT with augmented growth opportunities across both existing and new federal agencies.
