

Sanbell Merges With Jensen Design & Survey Inc.

September 05, 2024

Sanbell has merged with 40-person Jensen Design & Survey, Inc. of Ventura, California. Sanbell, formed by the recent mergers of Sanderson Stewart, Bellecci, Summit Engineering, and Coleman Engineering, is one of the fastest growing engineering, planning and design firms in the western United States. Sanbell has offices in Billings, Bozeman and Helena, Montana; Fort Collins, Colorado; Concord, Pleasanton, and Roseville, California; Elko and Reno, Nevada.

Jensen Design & Survey adds one of Ventura County's most established firms to the Sanbell family of companies. Jensen provides additional strength in land planning and development, water resources, floodplain mapping and land surveying to Sanbell's already comprehensive multi-disciplined services, which include civil infrastructure, water and wastewater utilities, multi-modal transportation and geotechnical engineering, community planning, construction management, surveying and mapping, landscape architecture, and communications and visualization services for public and private clients and communities across the West.

Jensen will continue to operate under its current brand name but will function as a Sanbell company under the leadership of Sanbell's CEO Michael Sanderson. Local leadership will continue under Susanne Cooper, Managing Principal, and the rest of Jensen's current local principals.

Donald Jensen, founder of Jensen, echoes this enthusiasm, stating "This merger provides an exciting growth opportunity for the Jensen team within the Sanbell organization. We anticipate significant benefits to our team members and for our valued clients as this team grows and prospers together."

Sanbell was formed in 2023, from companies that started in 1969 in a garage in Billings Montana, in a one-room office over TR's Bar & Grill on Salvio Street in Concord, California in 1983, in a kitchen in Reno, Nevada in 1978, and a small office in Roseville, California in 2010.

Jensen Design & Survey Inc. began in 1989 in a similar fashion, as a civil engineering firm with aspirations to provide services that improve the local quality of life, facilitate business, and enhance infrastructure using sustainable design, while maintaining environmental awareness. It is on that foundation, built from outstanding relationships, exceptional technical delivery, and respect for the environment and communities we operate in, that Sanbell is formed and will grow.

Sanbell is a dynamic and growing engineering, community planning and design firm comprised of over 200 professionals in locations across the West. Sanbell is committed to creating responsible, enduring communities and is devoted to our shared legacy of integrity and honest hard work, treating others well, and a spirit of entrepreneurship and service.
